Moneyup

Why wait 30 days for your government cheque?

The Problem

Managing monthly pay days creates significant financial stress and forces those on low government incomes without access to affordable credit into harmful lending cycles.

1. **Budgeting on a monthly basis** due to government payout schedules creates significant budgeting stress.

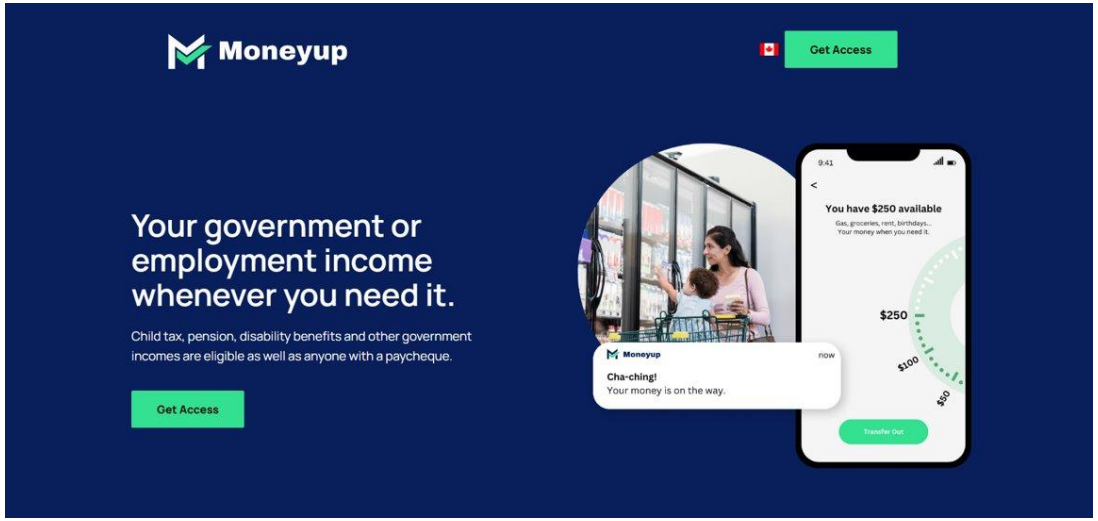
2. Low incomes correlate strongly with poor credit, resulting in being **locked out of affordable credit.**

3. Many customers need access to 'small value loans' but are **given more money than they need.**

4. Those on government incomes **use alternative finance options at a rate higher** than the regular population to make ends meet.

The Product/Features

Moneyup is a platform that focuses on improving the financial health of those on government incomes – through spending, saving, planning and 'lending'.



Child tax, pension, disability benefits and other government incomes are eligible.

Access government payments
early customers can access up to 50% of their government pay over the pay period

Prizeout Bonuses Deposit your cash advance onto a gift card for 2-20% bonus.

Rewards Marketplace Get more bang for your buck and access special offers.

Money Planning Easily build money habits without the need for complex math or the hard work.

Underlying Magic

We are uniquely positioned to launch an offer like Moneyup due to the strategic fit with Cashco.

Customer Focus

Our customer is ignored and undervalued by traditional finance and fintech – we not only want to serve them but also deeply understand them.

Cashco Experience

Cashco's experience helps Moneyup strategically through capital, customer access and industry expertise around the sub-prime market.

Financial Health / Purpose

Unlike many venture backed start-ups, we have a clear and focused purpose to build a business as a force for good.

Go-To Market Strategy

Our go-to-market strategy is focused on serving our customers as they are as opposed to how they should be handling their lives and their finances.

As the People's Champion we will stand up for the underserved who have been silenced for too long. We will build solutions that meet them where they are when others were unable to do so. We not only respect their livelihoods, but we fight for their struggles.

Advocating for Change.

Building for those who are forgotten, ignored by the masses, and working to fix a broken system that is debilitating and sets limits to a better life.

Leading a New Era.

Taking charge of the sub-prime market with New Money Rules. Allowing for real world solutions that fit into very real lives. Enabling each to put their best foot forward.

For the People.

Meeting the people where they are, in their moments, with their hardships. We are whole-heartedly: real, raw, accessible, non-corporate, non-judge-y, and never invasive.

Journey from MVP to Scale

A clear focus and limited scope allows us to de-risk investment before success at scale.

Complexity

Moneyup MVP

MVP Test to Prove Product Market Fit
Focus on validating problem solution fit and testing product market fit. Simple product & clear singular problem.

Objectives
- 1,000 customers
- Proof of concept validation
- Product market fit

Product Elements
- Prepaid card rails & program (outsource the “bank”)
- Custom front end/app
- Basic money movement
- Simple KYC/Onboarding
- Some manual processes in backend

Moneyup Scale

Improve Robustness of Product
Once product market fit is proven, focus on improving the economics of the core product as well as its ability to serve more customers (infrastructure complexity + more use cases) to prove the feasibility of the product at scale.

Objectives
- 10,000 customers
- Higher conversion rates
- Increased platform performance

Product Elements
- A higher interchange generating card
- Core banking system
- Improved features
- Automated processes

Moneyup Monetize

Improve Product Economics
Once feasibility and desirability are proven at scale, work to improve the viability and the economics of the core product.

Objectives
- 100,000+ customers
- Increase profitability
- Reduce costs of platform

Product Elements
- Build a deposit account (either through acquisition or licencing)
- Negotiate transaction fees once scale is hit
- Build currently outsourced functionalities
